CLAIMS

1. A method of manufacturing a safety helmet, comprising:

forming a basic safety helmet comprising a basic outer shell having a brim integrally formed with a dome; and

selectively removing portions of the basic safety helmet after said forming step to produce a modified safety helmet.

- 2. The method of claim 1, wherein said forming a basic safety helmet includes forming a basic safety helmet through at least one of injection molding and thermoforming.
- 3. The method of claim 1, wherein the basic safety helmet is composed of a polymer.
- 4. The method of claim 1, wherein the full brim has a width that varies around a lower perimeter of the dome.
- 5. The method of claim 1, wherein the basic safety helmet is formed in a single mold.
- 6. The method of claim 1, wherein said selectively removing portions of the basic safety helmet includes at least one of milling portions of the basic safety helmet.
- 7. The method of claim 1, wherein said selectively removing portions of the basic safety helmet includes at least one of selectively removing portions of the brim to form a modified brim and modifying the dome.
- 8. The method of claim 1, wherein the brim is a full brim having a uniform and constant width.

9. A method of manufacturing a plurality of hardhats, at least two of the hardhats having a different shape, comprising:

forming basic hardhats from a single mold, wherein the mold is configured to form a basic hardhat comprising a basic outer shell having a brim integrally formed with a dome; and

selectively removing portions of at least one of the brim and dome of each of the basic hardhats after said forming step to produce a plurality of modified hardhats, wherein at least two of the modified hardhats have different shapes.

- 10. The method of claim 9, wherein said forming basic hardhats from a single mold comprises forming the basic hardhats through injection molding.
- 11. The method of claim 9, wherein the basic hardhats are composed of a polymer.
- 12. The method of claim 9, wherein the brim has one of a constant width around at least a portion of a lower perimeter of the dome and a width that varies around at least a portion of the lower perimeter of the dome.
- 13. The method of claim 9, wherein said selectively removing portions of the basic hardhats includes at least one of machining portions of the basic hardhats.
- 14. The method of claim 9, wherein said selectively removing portions of the basic hardhats includes selectively removing portions of the brim to form a modified brim, wherein the different shapes are defined by different modified brims.

15. A method of manufacturing a safety helmet, comprising:

forming, through a process of injection molding using a single mold, a basic safety helmet comprising a basic outer shell having a full brim integrally formed with a dome; and

selectively removing portions of the basic safety helmet after said forming step to produce a modified safety helmet.

- 16. The method of claim 15, wherein the basic safety helmet is composed of a polymer.
- 17. The method of claim 15, wherein the full brim has a variable width around a lower perimeter of the dome.
- 18. The method of claim 15, wherein said selectively removing portions of the basic safety helmet includes selectively removing portions of the full brim to form a modified brim.
 - 19. The method of claim 15, wherein the full brim has a constant width.
